

AIR DRIVEN

Gas Boosters & Systems

SINGLE ACTING - SINGLE STAGE

PRESSURES UP TO 10,875 psi

DOUBLE ACTING- SINGLE STAGE

PRESSURES UP TO 21,750 psi

DOUBLE ACTING-SINGLE STAGE-TWO AIR HEADS

PRESSURES UP TO 21,750 psi

DOUBLE ACTING - TWO STAGE-TWO AIR HEADS

PRESSURES UP TO 21,750 and 30,000 psi

**DOUBLE ACTING-TWO STAGE
TRIPLE AIR HEAD**

PRESSURES UP TO 36,000 psi

**REBREATHER OXYGEN BOOSTERS
GAS BOTTLE MOUNTED CHARGING SYSTEMS**

PRESSURES UP TO 4,060 psi

**MAXPRO CUSTOM DESIGNED
Power Packs, Pump Skids,
Portable Test Carts and Test Benches**

MAXPRO Technologies was founded in 1995 to serve as the exclusive North American distributor for **Maximator**[®] liquid pumps, gas boosters, air amplifiers and high pressure valves, fittings and tubing. Our mission is to provide competitively priced, high-quality products backed by excellent customer service.

MAXPRO also provides regional sales and service through our locations in Humble, TX and Lafayette, LA, as well as a network of factory trained, independent distributors throughout the US, Canada and Mexico.

Gas Boosters

AIR DRIVEN FROM 30 PSI TO 36,000 PSI

Maximator[®] gas boosters are an excellent alternative to high pressure stationary type compressors. These boosters offer a compact, lightweight design that requires no electrical power, thereby providing a more flexible and efficient source for delivering high pressure gas.

Maximator[®] gas boosters will compress gases such as nitrogen and argon up to 36,000 psi, while oxygen can be compressed up to 5,000 psi using special seals and cleaning procedures. A wide variety of other gases can be compressed including hydrogen, natural gas, ethylene, nitrous oxide, neon, carbon dioxide, carbon monoxide and breathing air. Consult MAXPRO for special seals, venting, or cleaning requirements for these gases.

In applications where high output pressures are required and the gas supply pressure is low **Maximator**[®] gas boosters can be operated in series. MAXPRO supplies these booster combinations in 2, 3 or 4 stage arrangements as complete packages. To achieve higher gas flows, two or more boosters can work in parallel as a unit. Consult MAXPRO for more information on these special applications.

Features

- Pressures to 36,000 psi for most gases and 5,000 psi for oxygen
- Easy to install and operate
- Compact, lightweight design
- Single or double acting and two stage models
- Double air head available in single and two stage boosters
- No electrical power required
- Requires no high pressure seal lubrication
- Boosters are contaminant free
- Units can be operated in series or parallel
- Variety of pressure and compression ratios available

ACCESSORIES

Air Pilot Pressure Switches

- Air pilot pressure switches are pressure sensing devices with an air valve, used to turn air driven gas boosters, liquid pumps and air amplifiers on/off at a desired set pressure by controlling a pneumatic signal to the unit's air pilot control feature. Inherently safe, no electricity involved.
- Units can operate at their maximum drive air pressure, achieving desired outlet set pressure as rapidly as possible.
- Switch resets in approximately 10% drop in set pressure, for the controlled unit restart.
- Externally adjustable under pressure
- Normally Open switches close upon reaching set pressure (typically used to stop on pressure increase when the desired high pressure is achieved).
- Normally Closed switches open upon reaching set pressure (typically used to stop unit on pressure decrease, such as low bottle supply pressure).
- Standard materials: aluminum body (316 stainless steel optional), 440B piston, PTFE/Turcon/Buna-N seals, 303 SS gland.
- Stainless steel, oxygen service versions available.

Pressure Relief Valves

Catalog #	Inlet	Outlet	Service	Min Setting	Max Setting
MT3RV	1/4" FNPT (2)	1/4" FNPT	Liquid/Gas	500 psi	3,000 psi
MT10RV	1/4" FNPT (2)	1/4" FNPT	Liquid/Gas	1,000 psi	10,000 psi
MT25RV	1/4" HP	1/4" FNPT	Liquid/Gas	2,500 psi	25,000 psi
MT66RV	1/4" UHP	1/4" FNPT	Liquid/Gas*	10,000 psi	66,000 psi

* not bubble tight on gas service

Air Control Packages

- Engineered package of a filter, regulator, gauge, ball valve, pilot port connection as required and necessary fittings, ready for use on the following products:
 - ▣ ACM for all PPO, PP and PPSF pumps and MPLV2 air amplifiers
 - ▣ AC for all S pumps
 - ▣ ACP for all L, LSF pumps, DLE gas boosters, and DLA and GPLV2 amplifiers
 - ▣ ACG for all GX pumps

Gas Receivers

- Maxpro designed alloy steel, single ended closure pressure vessel, nickel plated inside and out with viton seals. 10,000 psi working pressure rated at room temperature. 1/4" high pressure coned and threaded connections at each end
 - ▣ REC-36S is 36 in³ volume, 2 1/2" OD x 21" OAL
 - ▣ REC-66S is 66 in³ volume, 2 1/2" OD x 33" OAL

NOTE:

*=Minimum required for basic operation

**= Minimum required to achieve maximum outlet pressure with 145 psi drive air

Pa=Drive air pressure, 145 psi maximum, 15 psi minimum Ps = Gas supply (suction) pressure

The 9/16"-18 is a 1/4" O.D. tubing, high pressure coned and threaded connection

Stall pressure must not be allowed to exceed outlet pressure rating.

Compression ratio is the minimum required ratio of outlet pressure/supply pressure.

Compression ratios and the control of heat generated are especially important on pure oxygen systems. Consult Maxpro for safety considerations.

Adapter (15A4H4P) is available to convert the 9/16"-18 connection to 1/4"FNPT. Order separately. Maximum working pressure: 15,000 psi

Contact Maxpro for arrangement and installation drawings.

Note:

- Drive air pressure operating range is 15-145 psi. Flows above are with 90 psi air drive, unless noted.
- Drive air flow requirements are up to 70 SCFM per air head, and up to 280 SCFM (total) for 8DLE models. Reduced air drive flow will produce lower gas flow.
- Drive air should be filtered to between 5µ and 40µ and have a dew point between 0°F and 50°F.
- Consult Maxpro for performance values on specific application parameters.

Gas Booster Systems

MAXPRO gas booster systems provide a compact, portable source for increasing gas pressures. These air driven booster systems are shipped assembled and fully tested, ready for turn-key installation. As with standard boosters, the gas booster systems require no electrical power, providing safe and economical operation.

Gas booster systems are capable of compressing most gases including nitrogen, argon, helium and hydrogen up to 36,000 psi. Systems feature special seals and cleaning can pressurize oxygen to 5,000 psi. All MAXPRO systems for use with hazardous gases are modified to ensure vent ports are piped to a common vent connection.

Applications

- Leak testing of pressure components
- Low pressure gas reclaim from storage bottles
- Gas charging accumulators
- Pressurizing gas cylinders and shock absorbers
- Breathing air systems for scuba and fire department SCBA tanks
- Boosting gas pressures from nitrogen and oxygen generators
- Gas assist injection molding
- Boosting gas pressures from vaporized liquid source

- NOTE:**
1. Various other gas booster models can be used to best fit your specific application.
 2. Schematic shown is the standard system. Other options may be added or removed as required.
 3. The hazardous gas systems have all vent ports plumbed to a common discharge port. This port must be plumbed to a safe vent area.
 4. The oxygen systems have all components cleaned for oxygen service.
 5. For higher flow rates and/or multiple stages, more than one booster may be used in the system.
 6. Compression ratios and the control of heat generated are especially important on pure oxygen systems. Consult Maxpro for safety considerations.

Flow Schematic

Oxygen Gas Booster Systems

Small, lightweight and economical, MAXPRO oxygen gas booster packages are ideal for aircraft and bottle filling applications. Requires only an air source for power (70 psi minimum) and an oxygen supply bottle that can be used to as low as 100 psi. These booster packages will achieve up to 2,000 psi outlet pressure. Single and double acting boosters are available to meet flow requirements.

Cleaning for Oxygen Service

Features

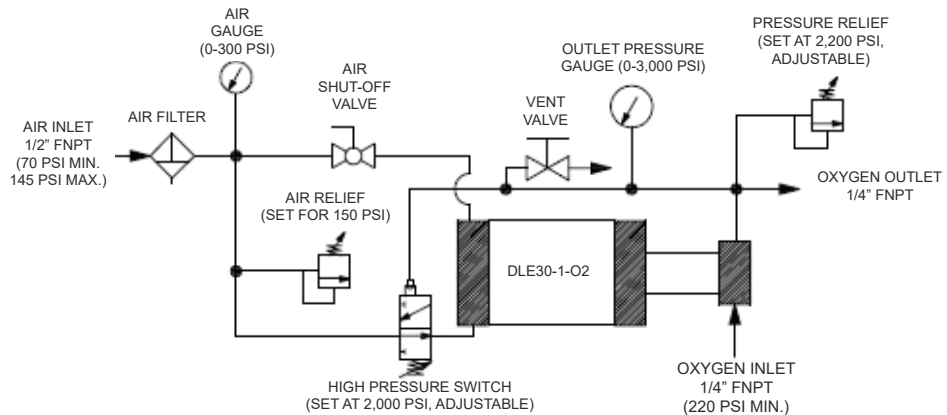

- All stainless steel components, cleaned for oxygen service
- Contaminant free operation with complete separation and isolation between the oxygen and air drive sections
- No electrical power required, only a 70 psi shop air source
- Automatic shut-off at desired outlet pressure for unattended operation
- Safety relief devices and pressure gauges included on both gas and air sides
- Manual vent valve for venting gas pressure prior to disconnecting outlet line
- Drive air filter and shut-off ball valve to manually stop booster
- Drive air connection is 1/2" FNPT
- Oxygen gas inlet and outlet connections are 1/4" FNPT
- All components are mounted to the booster and tested prior to shipment
- Compression ratios and the control of heat generated are especially important on pure oxygen systems. Consult Maxpro for safety considerations.

SINGLE ACTING OXYGEN BOOSTER PACKAGE

MT02-2-DLE30-1

FLOW SCHEMATIC

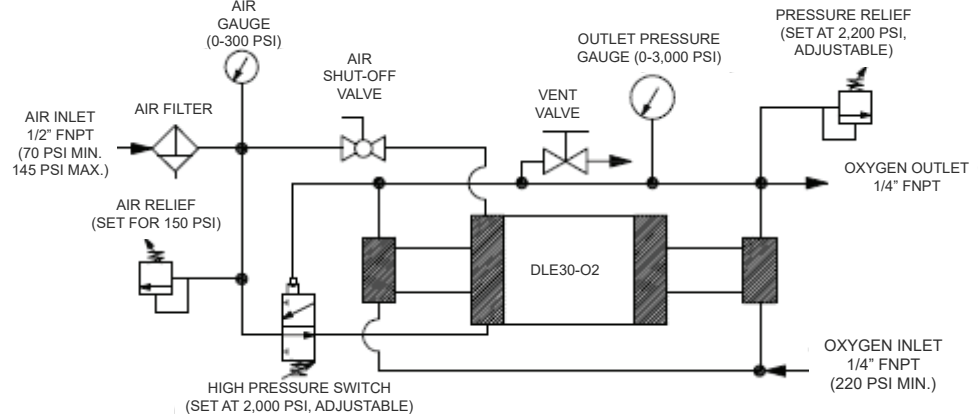

This package is 21" LG x 15" HG and weighs approximately 44 lbs.

DOUBLE ACTING OXYGEN BOOSTER PACKAGE - FOR HIGHER FLOW RATES

MT02-2-DLE30

FLOW SCHEMATIC

This package is 25" LG x 10" HG and weighs approximately 54 lbs.

ROB22 (-HL) Rebreather Oxygen Booster

The Maximator® ROB rebreather oxygen booster is specifically designed for use in the sport diving field. This compact compressed air or hand driven oxygen booster provides a rugged and reliable means of recharging rebreather size tanks. The ROB Oxygen Booster is also available as a portable package stored in a sturdy plastic waterproof case. Compression ratios and the control of heat generated are especially important on pure oxygen systems. Consult Maxpro for safety considerations.

ROB boosters:

- Are lightweight and portable
- Ideal for installing in a Pelican Case
- Finned Gas Barrel for efficient gas cooling
- Oxygen Cleaned
- Can be driven from either compressed air or from bottle supply

Wetted materials of construction:

Seal package: Filled Teflon (PTFE) Viton

- Pump Body: 316L SS
- Piston: 440 SS
- Fittings: 316 SS

Approximate Dimensions:

- Height: 8"
- Depth: 4 1/2"
- Width: 4 1/2"
- Side inlet/outlet: Standard

Optional Accessory:

- ACP - Air control package consisting of a filter, regulator with gauge, shut-off valve and required fittings.
- Optional hand lever operation: HL

Technical Data:

Air drive pressure:	14.5 - 145 psi
Maximum Outlet Pressure at air drive of 145 psi:	4,060 psi
Pressure Ratio:	1:28
Displacement per cycle:	0.28 (In ³)

Connections:

Inlet:	1/4" NPT
Outlet:	1/4" NPT
Air Drive:	1/4" NPT
Maximum operating temperature:	140° F
Net Weight:	9 lbs.
Maximum operating temperature:	140° F / 60° C

Nitrogen Gas Booster Systems

MAXPRO nitrogen gas booster packages offer an economical method of boosting nitrogen (or other select gases or air) gas pressure up to 4,400 psi. The package features a compact and lightweight arrangement that is turn-key and fully tested. No electrical power required, only a 75 psi shop air source is needed. Single and double acting boosters are available to meet flow rate requirements.

Applications

- “Pop Floats” or tire filling
- Pressurizing shock struts
- Charging hydraulic accumulators
- Gas reclaim from bottles
- Boosting pressures from nitrogen generators
- Boosting pressures from vaporized liquid nitrogen

Features

- Shop air driven units shown below.
- For high pressure nitrogen driven option add -DASR to model number
- Nitrogen drive units include a high pressure regulator with gauge, a gas supply pressure switch to stop booster when supply bottle pressure is too low, and a dry air spool modification on the booster for longer service life. These units can also be driven on shop air pressures.
- All packages include:
 - contaminant free operation with complete separation and isolation between the gas and air drive sections
 - automatic shut-off at desired outlet pressure for unattended operation
 - safety relief valves and gauges on gas and air/nitrogen sides
 - drive air/nitrogen shut-off ball valve to manually stop booster
 - manual vent valve for venting gas pressure prior to disconnecting outlet line

SINGLE ACTING NITROGEN BOOSTER PACKAGES

MTNB3-DLE30-1 - to 2,200 psi

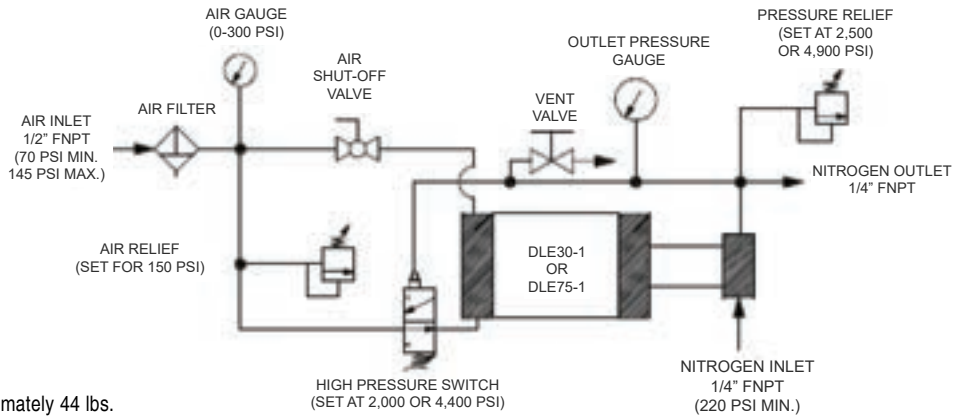

MTNB4-DLE75-1 - to 4,400 psi

Air drive unit shown. Nitrogen drive unit available.

This package is 21" LG x 15" HG and weighs approximately 44 lbs.

FLOW SCHEMATIC

DOUBLE ACTING NITROGEN BOOSTER PACKAGES - FOR HIGHER FLOW RATES

MTNB3-DLE30 - to 2,200 psi

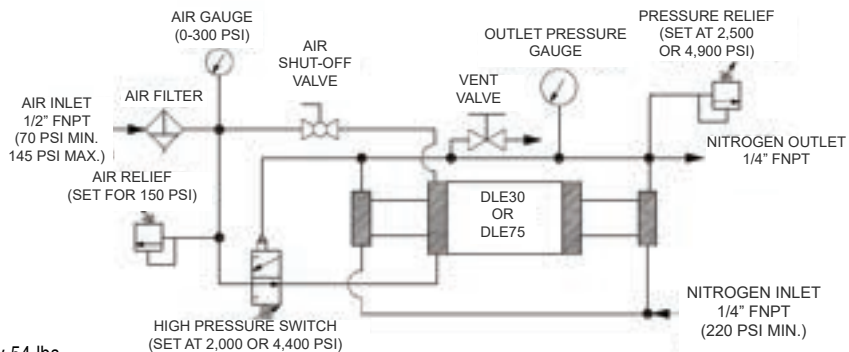

MTNB4-DLE75 - to 4,400 psi

Air drive unit shown. Nitrogen drive unit available.

This package is 25" LG x 10" HG and weighs approximately 54 lbs.

FLOW SCHEMATIC

Gas Bottle Mounted Charging System

Engineered to provide compact and portable high pressure gas solutions

MTBGN4-DLE30-1 FOR NITROGEN SERVICE
 MTBGO4-DLE30-1 FOR OXYGEN SERVICE

Suitable for industrial gas charging applications

Bottle and Bottle Cart not included

Features:

- Low cost, fast shipment, ready to use
- CGA connection and hose included
- Gas inlet pressure to 3,000 psig
- Gas outlet pressure to 4,350 psig
- Adjustable 1,450-4,350 psig automatic shut-off switch
- Completely portable nitrogen driven nitrogen gas booster
- Oxygen system requires air or nitrogen drive gas
- Compression ratios and the control of heat generated are especially important on pure oxygen systems. Consult Maxpro for safety considerations.

Benefits:

- Easy to connect and operate
- Compact construction style
- Lightweight and easy to transport
- No risk from heat, flame or spark
- One source drives and feeds the booster station

GAS BOTTLE MOUNTED BOOSTER PERFORMANCE EXAMPLE:

Booster drive pressure: 140 psig
 Vessel volume: 218 cubic inches
 Vessel start pressure = 800 ps

Gas Supply Pressure	Vessel Final Pressure	Maxpro time to fill	Brand "H" time to fill
1500	2000	0:20	0:53
1250	2000	0:35	1:41
1000	2000	0:58	3:25
800	1300	0:35	4:20

OTHER PRODUCTS

Valves, Fittings & Tubing

- Highest quality for superior product performance
- Standard metals of stainless steel
- Pressures to 152,000 PSI

Air Amplifiers & Systems

- Air driven to 4,350 PSI
- Deliver increased air pressure to shop floor equipment and work stations
- Require no electrical power
- Single or double acting models

Liquid Pumps & Systems

- Air driven to 60,000 PSI
- Economic hydraulic power
- Interchangeable with other leading pumps
- Require no electrical power
- Variety of sizes and styles to suit your application

Repair Service Available

- Guaranteed quality workmanship
- Cost effective quick turnaround
- Use original manufacture parts
- Factory support
